PROFESSIONAL EXPERIENCE

Fanatics

Boulder, CO, USA

Software Engineer II

June 2023 - Present

- Spearheading and developing tools and pipelines allowing developers to configure and deploy their applications onto AWS EKS. Prioritizing user experience, with a focus on ease of use and stability
- Onboarded 30+ applications, streamlining deployment processes across 9 Kubernetes clusters
- Created a CLI tool in Golang to allow developers to interact with the new EKS platform
- Created the capability of migrating existing application configurations defined in terraform into helm charts using abstract syntax trees
- Responsible for infrastructure management to support K8 platform
- Continuously updating project CI pipelines to automate common tasks, such as creating new versions of docker images and running unit tests.

Fanatics

Boulder, CO, USA

Software Engineer I

June 2022 - June 2023

- Developed a POC for automated disaster recovery workflows using Temporal, written in Golang
- Spins up priority zero cloud infrastructure (VPC, Consul, Vault) in a new AWS account in a couple of hours, reducing the previous, manual process that took several days.
- Developed a Python package that abstracted AWS SSM commands which facilitate persistent patching of hundreds of EC2 servers across multiple accounts.

Fanatics

Boulder, CO, USA

Technology Intern

June 2021 - June 2022

- Created a Flask backend application to perform synthetic testing of company priority zero core infrastructure (Vault, Consul, PDNS) for better visibility and real time alerts and pages
- Created a central frontend UI in ReactJS to aggregate all statuses in a readable format

Skyline Products

Colorado Springs, CO, USA

SWE Intern

May 2020 - August 2020

- Developed a python test suite with pytest that tested functionality of electric road signs.

EDUCATION

University of Colorado - Boulder

August 2018 - May 2022

Bachelor's, Computer Science

GPA: 3.9

PROJECTS & OUTSIDE EXPERIENCE

SortVisualizer

- Visual representation of various common search algorithms
- Gained experience working with the basics of React and DOM manipulation
- Solidified my understanding of these algorithms in terms of run time and order of execution

Evaluating Cutting Edge Positioning Tech

- Coordinated with 5 peers and company mentor to develop a requested web app
- Lead the development of the frontend page, retrieving data from the MongoDB database and displaying the measurement in an understandable grid and map

Producer/Consumer

- Developed a multithreaded program that uses requester/resolver threads and a shared queue to resolve lists of domains to their respective ip address
- Utilized semaphores and mutexes
- Written in C

SKILLS

Skills: Python, Go, Git, AWS, Kubernetes, Flask, Docker, Terraform, Agile
